

Housing Gap – Summary Fact Sheet

Dane County, Wisconsin

Everyone needs housing that is affordable, whether your annual income is \$25,000 or \$250,000. This fact sheet discusses the housing gap for Dane County residents whose annual income is below the area median income (AMI).¹

What is a housing gap?

In Dane County there is a significant housing gap. A housing gap is the difference between the number of housing units available at an affordable price, and the number of units that are needed. When there is a housing gap, residents may live in housing they cannot afford. Or, people may live in overcrowded housing or housing that is substandard, or in disrepair, or in the worst case, they are homeless.

According to the recent report, “Housing Needs Assessment: Dane County and Municipalities” over 22,000 very low income households pay more than 30% on rent. Over 12,000 very low income households pay more than 50% of their income in rent in Dane County, of those 2,200 are seniors.

Housing-cost burdens

When a household pays more than 30% of their monthly income on housing, they are considered to be “cost-burdened,” When they pay more than 50% of their monthly income on housing, they are “extremely cost-burdened.”

When households with lower incomes - *particularly* those with incomes below 50% of the Dane County median income – pay more than 30% of their income on housing, they have problems meeting basic needs including daily meals, clothing, prescriptions, special diets, medical and school expenses, and transportation.²

Why should I care about the housing gap?

Individuals and families that are housing burdened in Dane County already reside in your community. They are your neighbors: the elderly, the family down the street, the grocery clerk, truck driver, or the single mom with children.

When residents are one car repair, or one household or medical expense away from not being able to pay their monthly housing costs, it creates unstable housing and neighborhoods. Individuals and families are more vulnerable. Residents are forced to choose between basic necessities, and school children suffer

² Please note: The 30% threshold of housing affordability, does not include the monthly costs of transportation to and from work and household errands.

resulting in more drop outs and transfers. In 2012-2013, Dane County school districts, reported 1800 homeless students, many residing in communities outside the city of Madison.³

Economic Impact

The lack of housing negatively impacts our workforce and contributes to higher employee turnover for area employers, driving up the cost of doing business, and reducing our regional competitiveness.

Why is there a housing gap?

The housing gap is nationwide. According to a recent report by Pew Charitable Trust, from 2000-2013, the United States saw stagnant incomes and rising housing costs. Wisconsin was the hardest hit, with Ohio second to last. Wisconsin's share of the middle-class dropped from 54.6 percent in 2000 to 48.9 percent in 2013, for a total of 5.7 %. The percentage of middle-income families is now below half of Wisconsin's total population.⁴

With stagnant incomes and higher housing costs, for those with incomes below the median, housing is much more difficult to afford. We see similar trends in Dane County. From 2000-2013, the area median income went down \$8,768, housing prices increased by \$29,310 and poverty rose 6.8 percentage points.

	Median income – 12.7%	Median home price + 14.6%	Poverty rate + 6.8%
2000	\$68,849	\$199,490	6.9%
2013	\$60,081	\$228,800	13.7%

Census 2000, inflation adjusted; 2013 ACS Survey. *Census 2000, (SF 3) inflation adjusted; ACS 5yr.2009-2013* *US Census Small Area Income & Poverty Estimates*

In the Madison area, an extremely low vacancy rate pushes housing prices up further, and makes it even more difficult to find suitable and affordable housing.
